STREAMLINE FIELDWORK FOR UTILITIES

UTILITIES IMPROVE SAFETY, RELIABILITY, & EFFICIENCY USING MIMS

MIMS, which stands for Mobile Information Management System, streamlines utility field work by delivering all the information needed – such as GIS, SAP, Maximo, CGI, Oracle – to complete any type of scheduled or unscheduled task using smart forms and friendly mapping.

MIMS uses the latest Esri software development environment and aligns with emerging Esri patterns and practices to extend the system of record and system of engagement capabilities of the ArcGIS platform. MIMS allows field workers to complete all daily work with a single, disconnected map viewer built with ArcGIS Runtime. Results update ArcGIS Enterprise and other integrated business systems.

SPEAK WITH REPRESENTATIVE TODAY!

UTILITIES USE MIMS TO IMPROVE
- INSPECTION PROGRAMS
- MAINTENANCE PROGRAMS
- COMPLIANCE PROGRAMS
- CAPITAL CONSTRUCTION PROGRAMS
- AND MORE . . .
MIMS CAPABILITIES

- Spatially enable any utility business process
- Share maps and data with thousands of users
- Streamline data collection at the point of activity
- Integration with ESRI® ArcGIS platform
- Seamless integration with business systems
- Support enterprise IT and security standards
- Build friendly and smart task-based workflows
- Provide custom configurable forms
- Automate creation of ArcGIS runtime content
